

Information Security Manual

Secure System Engineering Principles Policy

BS ISO/IEC 27001:2013

Level 1 Manual

Reference	MSP 71
Revision	01
Date	20/02/2018
Page:	Page 1 of 1

Top management at Stanmore Ltd understands that principles for engineering secure systems should be established, documented, maintained and applied to any information system implementation effort. To this end Stanmore Ltd has produced this secure system engineering principles policy aligned to the requirements of ISO/IEC 27001: 2013 to ensure that the Company:

- Produces principles that will be applied to in-house information system engineering activities
- Ensures that security will be designed into all architecture layers balancing the need for security with that of accessibility
- Ensures that new technology is analysed for security risks
- Ensures that the design is reviewed against known attack patterns
- Ensures that Principles are reviewed to ensure their effectiveness in contributing to enhanced standards of security within the engineering process
- Ensure that Principles are reviewed to ensure they remain up-to-date in terms of combating any new potential threats and in advances in technology

Top management also understand that certain suppliers may have inadequate information security management and will, in such cases, identify and apply controls necessary to ensure security is maintained. It will use

- confidentiality agreements
- non-disclosure agreements and
- second party audits where appropriate.

The Company will also take into account any Data Protection regulations and will be aware of all legal and contractual responsibilities in the area.

Application development procedures will also apply secure engineering principles when developing applications for both input and output interfaces.

Responsibility for upholding this policy is truly company-wide under the authority of the Managing Director who encourages the personal commitment of all staff to address information security as part of their skills.
